

FOODSERVICE OPERATIONS MANAGEMENT

Success in foodservice comes down to three essential components: customer satisfaction, quality of products delivered, and cost. These fundamental elements should be the focus of an effective software solution. Computrition's **Foodservice Operations Management software (FOM)** can provide these dynamics like no other system can.

Computrition has set the industry standard for quality and effectiveness by offering a wide array of products and services that help you efficiently plan, organize, and manage your operations. Our FOM software delivers boundless management features, providing access to valuable information virtually impossible to access in a non-automated environment.

By implementing our system, immediate process improvements allow you to maintain accurate inventory levels, administer effective menu programs, reduce food waste, and achieve overall cost savings. On average, our customers save 5 to 25% on food and supply costs through cost-control functions, including (but not limited to) reduction in standing inventory, elimination of over- and underproduction, and just-in-time ordering.

AUTOMATING YOUR FOODSERVICE OPERATION

FEATURES

Leverage the power

of an integrated system that eliminates redundant data entry

Scale recipe and menu amounts

according to production needs

Implement order entry interfaces

with major vendors

Globally search and replace

ingredients in your recipes and recipes in your menus

Update vendor item prices

that reflect costs at the food item, recipe, and menu level

Ensure proper food handling

using the integrated HACCP functionality

Assign menu total counts

to selected menus

Add ability to print nutrition facts labels

for recipes

Store a history of post meal counts

to assist in forecasting future production and order amounts

Automate

perpetual or just-in-time inventory

Track

incoming and outgoing requisitions

Generate

purchase orders

Confirm orders and produce reports

showing discrepancies between what was ordered and what will be received

Develop

multi-site roll-up reports

Merge information

from a master set of data out to sites

Customize, filter, and save

reports in a variety of formats such as PDF, Excel, and HTML

BENEFITS

Analyze nutrient information at the food item, recipe, and menu level

Follow the cost changes of a food item over time

Calculate the items to order based on menu requirements

Automate a central production/kitchen environment

Determine inventory values

Create pull sheets and inventory worksheets

ADD-ON MODULES

- Nutrition Food Labeling
- Single Sign-On (SSO)
