

MEAL CHOICE CONNECT

At some point we all have been in this situation: we're hungry and need a meal ASAP. However, we're not exactly sure what we want, so we pull out our phone and search for a few restaurants close by and browse their online menus to decide what looks appealing and/or is within a certain diet. Once we choose where and what we would like to eat, the rest is history!

Having this ability to quickly find meal choices online can serve as a tremendous benefit for both consumers and the retail locations in which they are interested. It helps drive traffic, and consumers are prepared ahead of time, meaning faster ordering, reduced line queues, and increased revenue!

At Computrition, we understand the value of accessing meal choices in the patient recovery process as well as ensuring that hospital staff stay adequately fueled throughout their busy shifts. With that in mind, we developed **Meal Choice Connect**, a powerful web-based, add-on module that allows individuals to view options at various locations within a hospital, from any browser. Customers can easily access daily meal offerings for each meal period, see nutritional information (including recipe allergens, ingredients, and nutrients) through full integration with our Hospitality Suite, add item selections to a personalized list, and view total nutritional information for an entire meal selection. After a few clicks in Meal Choice Connect, your customers will know exactly what they want to eat and, more importantly, that they don't need to look any further than your facility to get it!

MAKE YOUR RETAIL AREAS COME ALIVE ONLINE!

FEATURES

Easy-to-use landing screen

with each facility and displayable corporate logo

Personalized menu items

that include enticing descriptions for a more creative, restaurant-quality display

Full integration

with our Foodservice Operations Management and/or Nutrition Care Management software, ensuring that recipe allergens and sub ingredients are shown
